The high-pressure pump CP4 delivers the fuel into the connected rail under high pressure. The CP4 consists of one or two high-pressure elements, each integrated in a housing with its own camshaft. The pump camshaft is driven by belts, chains, or cogwheels and moves the pump pistons to generate the required high pressure.

*It then goes to the high pressure fuel pump (HPFP). The HPFP pressurizes diesel fuel up to 26,107 psi (1800 bar) in an "accumulator rail", shown below on a CBEA engine, a common tube/rail shared by all of the fuel injectors. Unlike most common rail systems which are made by suppliers, VW makes the common rail themselves. (Bosch makes the fuel ...*
