An Injection Pump is the device that pumps fuel into the cylinders of a diesel engine.Traditionally, the injection pump was driven indirectly from the crankshaft by gears, chains or a toothed belt (often the timing belt) that also drives the camshaft.It rotates at half crankshaft speed in a conventional four-stroke diesel engine.Its timing is such that the fuel is injected only very slightly ...

[Injection pump - Wikipedia](#)

The PCE coolant pump is an electronically commuted centrifugal pump. The pump is characterized by its high efficiency, compact design and low weight. The pump's sturdy design enables it to be mounted to a combustion engine. Furthermore, its optimized noise emission also makes the pump an ideal solution for use in hybrid and electric vehicles.

Per information from owners taking delivery of 2021 Ram pickups with Cummins diesel engines, as well as photos I've seen on social media, it appears that Ram/Cummins have gone back to the old Bosch CP3 fuel injection pump. They had tried the CP4 pump for two model years (2019, 2020) with poor success.

The high-pressure pump CP4 delivers the fuel into the connected rail under high pressure. The CP4 consists of one or two high-pressure elements, each integrated in a housing with its own camshaft. The pump camshaft is driven by belts, chains, or cogwheels and moves the pump pistons to generate the required high pressure.

In pump-line-nozzle designs, the pump is driven by the engine's gear train. Common rail pumps can be driven by gears or toothed belts. Some common rail systems, such as Delphi's F2 and F2P Distributed Pump Diesel Common Rail Systems, also use pumps that resemble unit pump or unit injector pumps and are driven by the camshaft.
