

Glucose is a simple sugar (monosaccharide) with the chemical formula C6H12O6. It is a primary energy source for most organisms and is found in various fruits, honey, and plant-based products. Glucose is a six-carbon sugar that can be converted into other forms of sugar or used directly for energy.

Glucose is a simple sugar (monosaccharide) with the chemical formula C6H12O6.

Glucose is a simple sugar (monosaccharide) with the chemical formula C6H12O6. It is a primary energy source for most organisms and is found in various fruits, honey, and plant-based products. Glucose is a six-carbon sugar that can be converted into other forms of sugar or used directly for energy.

Glucose is a simple sugar (monosaccharide) with the chemical formula C6H12O6.
