A prime number (or a prime) is a natural number greater than 1 that is not a product of two smaller natural numbers. A natural number greater than 1 that is not prime is called a composite number.For example, 5 is prime because the only ways of writing it as a product, 1 × 5 or 5 × 1, involve 5 itself.However, 4 is composite because it is a product (2 × 2) in which both numbers are smaller ...

Also some mathematical contributions have started to develop, most notably the works by Pulvirenti and collaborators [70 – 72, 68, 69, 395]. Here we point out some of the most fundamental mathematical issues in the field. Since the physical literature is considerable, we only give a very restricted choice of physicists' contributions.

It therefore becomes desirable that approximate practical methods of applying quantum mechanics should be developed"-Paul Dirac, 1929. Many took up Dirac's charge, and soon physicists built mathematical techniques that could approximate the qualitative behavior of molecular bonds and other chemical phenomena.

1. Life: 1788–1860. Exactly a month younger than the English Romantic poet, Lord Byron (1788–1824), who was born on January 22, 1788, Arthur Schopenhauer came into the world on February 22, 1788 in Danzig [Gdansk, Poland] — a city that had a long history in international trade as a member of the Hanseatic League.

Six degrees of separation is the idea that all people on average are six, or fewer, social connections away from each other. Also known as the 6 Handshakes rule. As a result, a chain of "a friend of a friend" statements can be made to connect any two people in a maximum of six steps.It was originally set out by Frigyes Karinthy in 1929 and popularized in an eponymous 1990 play written by John ...

Information is extensive. Central is the concept of additivity: the combination of two independent datasets with the same amount of information contains twice as much information as the separate individual datasets. The notion of extensiveness emerges naturally in our interactions with the world around us when we count and measure objects and structures.
