The difference between RFC 2307 and RFC 2307bis is the way which group membership is stored in the LDAP server. In an RFC 2307 server, group members are stored as the multi-valued memberuid attribute, which contains the name of the users that are members. In an RFC2307bis server, group members are stored as the multi-valued member or uniqueMember attribute which contains the DN of the user or ...

You can override the community string that LogicMonitor is using for the device by specifying it in the debug command window: 'snmpget community=<your\_community\_string> <your.hostname> .1.3.6.1.2.1.1.2.0. If this command succeeds when you specify the community string where it previously failed, LogicMonitor has the wrong community string set for this host.

Troubleshooting Tools. When attempting to troubleshoot DNS with the NRPT enabled, be careful about using nslookup. Nslookup will bypass the NRPT and use the DNS servers configured on the network adapter. Instead of nslookup, use the Resolve-DNSName PowerShell cmdlet. There are a few PowerShell cmdlets that can be used to view NRPT settings.
