Obviously, a drug (or any medical treatment) should be used only when it will benefit a patient. Benefit takes into account both the drug's ability to produce the desired result (efficacy) and the type and likelihood of adverse effects (safety). Cost is commonly also balanced with benefit (see Economic Analyses in Clinical Decision Making).

The Doctor of Nursing Practice (DNP) is designed to prepare experts in clinical nursing practice or in systems-focused roles outside of direct patient care. It is the pinnacle of practice-focused nursing degrees, building upon

previous nursing knowledge with advanced courses in quality improvement, evidence-based practice, and systems leadership.

[What is a DNP | What is a Doctor of Nursing Practice](#)

Improving patient experience is not simple. As well as effective leadership and a receptive culture, trusts need a wholesystems approach to collecting, analysing, using and learning from patient feedback for quality improvement. Without such an approach it is almost impossible to track, measure and drive quality improvement.
